Experiment 12

Security and Governance in the Vehicle Service Application

Aim

To implement security and governance in the Vehicle Service application using role-based access control, user permissions, data protection and workflow restrictions so that owner and vehicle information is accessed only by authorized users.

Procedure

1. **Open the application:** log in to Zoho Creator and open the Vehicle Service application.
2. **Create user roles:** define roles such as Service Manager, Front Office, Technician and Pickup/Drop Team.
3. **Configure permissions:** assign suitable permissions to each role for viewing, adding, editing and deleting service requests.
4. **Restrict data access:** configure report permissions and record-level access rules to protect owner contact details, insurance copies and signatures.
5. **Secure forms:** make essential fields mandatory and validate inputs to prevent incomplete or invalid submissions.
6. **Configure authentication:** use the available authentication settings so only authorized users can access the application.
7. **Protect workflows:** review Deluge scripts, email notifications and integrations to prevent unauthorized data access or unintended actions.
8. **Audit application activity:** use audit logs and monitoring features to review important changes and investigate suspicious activity.
9. **Test security:** log in with different roles and verify each user can access only the features and records permitted.

Access Matrix

Role	Access	View	Edit	Delete	Export
Service Manager	All	Yes	Yes	Yes	Yes
Front Office	Form, reports, page	Yes	Yes	No	No
Technician	Kanban, own jobs	Own	Status only	No	No
Pickup/Drop Team	Map report	Limited	No	No	No
Vehicle Owner (Portal)	Request form	Own	No	No	No

Security Test Cases

Test	Expected Result
Owner opens another owner's record	Not visible; only own records are listed
Technician tries to delete a request	Action is not available
Submit form without mandatory fields	Blocked with validation message
Review the Metrics page	User access and activity are listed for auditing

Process Diagram

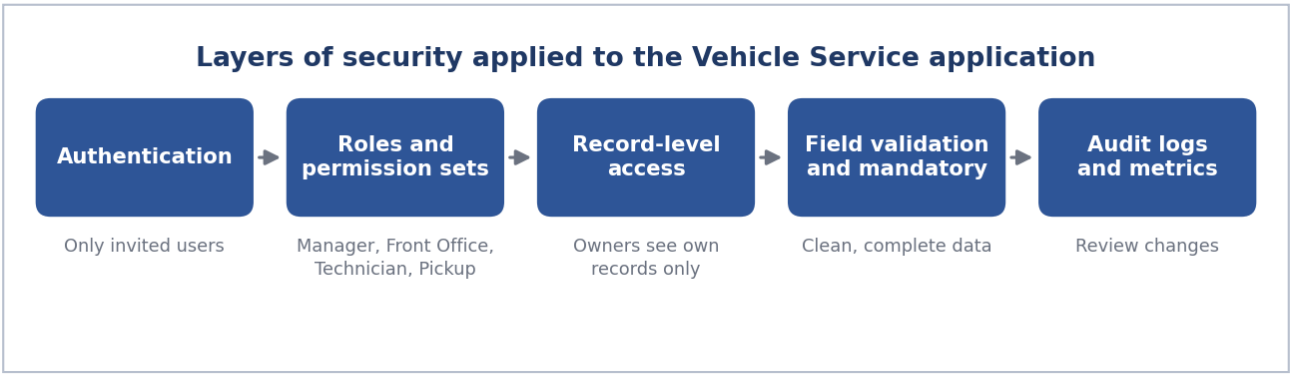

Figure 12.1: Diagram of the security layers (illustrative diagram, not a screenshot).

Permission Matrix by Role

Module	Service Manager	Front Office	Technician	Pickup/Drop	Owner (Portal)
Service_Request_Form	Add, View, Edit, Delete	Add, View, Edit	View	No access	Add, View own
Service_Request_Report	All records	All records	Assigned jobs	Pickup fields only	Own records
Command Center page	Yes	Yes	No	No	No
Export to Excel	Yes	No	No	No	No

Governance Practices

- Give each user only the access their job needs.
- Review audit logs and user activity regularly.
- Keep email notifications and integrations free of sensitive data such as insurance copies.
- Deactivate users who leave the service center.

Result

Security and governance were implemented in the Vehicle Service application by configuring user roles, access permissions, data validation and activity monitoring.
